ST LOUIS UNIVERSITY

Inspection

Type: ROUTINE INSPECTION

Date: SEP-05-2003

**221 N. GRAND BOULEVARD, DB-106
ST LOUIS, MO 63103**

**3.6 (b) (4)
PRIMARY ENCLOSURES.**

(4) Resting surfaces. Each primary enclosure housing cats must contain a resting surface or surfaces that, in the aggregate, are large enough to hold all the occupants of the primary enclosure at the same time comfortably. The resting surfaces must be elevated, impervious to moisture, and be able to be easily cleaned and sanitized, or easily replaced when soiled or worn. Low resting surfaces that do not allow the space under them to be comfortably occupied by the animal will be counted as part of the floor space.

The two cats have recently been moved to a new enclosure in the Caroline Building that did not contain elevated resting surfaces for them. This was corrected during the inspection.

This inspection was conducted by Dr. Richard Doyle, director, and Dr. Jami Niemann, VMO.

No covered species were located at the Pediatric Research Institute or Macelwane Hall at this time.
